

Nedap **CowControl**

Augmented Reality

Bringing herd insights to life in the barn

Nedap CowControl with Augmented Reality

What if everything you need to know about each cow was shown right above them as you walk through the barn? And what if you could interact with these insights in the most intuitive way possible, using hand gestures and voice commands?

This may seem like a vision of the future, but it's already here today. Nedap brought Augmented Reality to dairy farming and further evolves it. Will it become the new reality on your farm?

Work more enjoyable. Be more productive.

- ✓ See at a glance which cows are flagged and need attention.
- ✓ Use hand gestures and voice commands to navigate through cow insights and register actions on the spot via holograms.
- ✓ Save time and labor during herd checks and treatments.

Current insights brought to life

- ✓ Heat
- ✓ Reproduction
- ✓ Health
- ✓ Location
